AWS Internship — Internship Studio (Training & Completion Certificates)

Preetam Kambar

DevOps Engineer | AWS · Docker · Kubernetes · CI/CD | Open to Full-Time Roles

Belagavi, Karnataka, India

Summary

Cloud & DevOps Engineer focused on automating infrastructure so teams can ship faster and more reliably. As a fresher with hands-on production experience, I've deployed containerized applications on AWS EC2, built end-to-end CI/CD pipelines with GitLab CI/CD and Jenkins, and orchestrated workloads with Docker and Kubernetes. What I work with: • Cloud Infrastructure — AWS EC2, deployment & management • Containerization & Orchestration — Docker, Kubernetes • CI/CD — GitLab CI/CD, Jenkins (build → test → deploy) • Web & Security — Nginx reverse proxy, Cloudflare SSL/HTTPS • Linux & Automation — shell scripting, server provisioning During my internship at Softmusk Solutions, I deployed secured, publicly accessible applications on EC2 with Docker, Nginx, and SSL, and built pipelines that removed manual deployment steps entirely. B.E. Computer Science, S.G. Balekundri Institute of Technology (2026). Certified in AWS Cloud Practitioner Essentials and AI-DevOps Engineer Foundation. Target roles: Cloud Engineer | DevOps Engineer | Site Reliability Engineer (SRE). Open to full-time opportunities across India (remote/hybrid/onsite). Portfolio: preetamkambar.cloud

Experience

Internship Studio

AWS Intern

June 2026 - August 2026 (3 months)

AWS Fundamentals

- Completed hands-on AWS training covering core cloud services and infrastructure fundamentals, including EC2, S3, IAM, and VPC basics
- Applied training concepts in guided project work, building practical familiarity with cloud infrastructure setup and management

Certification

- Earned Certificate of Training and Certificate of Internship (ID: ISAWST3339751 / ISAWSI3339751)

Softmusk Solutions Pvt. Ltd.

Cloud DevOps Intern

January 2026 - May 2026 (5 months)

Belgaum

Cloud Deployment

- Deployed and managed containerized applications on AWS EC2, configuring instances, security groups, and storage for production-ready environments
- Configured Nginx as a reverse proxy and set up HTTPS via Cloudflare SSL, securing all public-facing deployments

CI/CD & Automation

- Built CI/CD pipelines with GitLab CI/CD and Jenkins covering code push → build → test → deploy, cutting deployment time from roughly 30 minutes to under 5 minutes and removing manual release steps
- Wrote Linux shell scripts to automate server provisioning, reducing environment setup time by an estimated 60-70%

Container Orchestration

- Managed Kubernetes Deployments and Services, handling pod scaling and health monitoring across multiple containerized workloads

Collaboration

- Followed Git branching workflows and merge request reviews in a team DevOps environment
- Participated in agile sprints, daily standups, and peer code reviews

Education

S G Balekundri Institute of Technology

Bachelor of Engineering - BE, Computer Science · (December 2022 - May 2026)
